Update 2024-05-07 (4.57.1, 4.57.2, 4.57.3)

The system was updated to versions 4.57.1 [1], 4.57.2 [2] and 4.57.3 [3].

These releases contain hotfixes as well as the following improvements:

- The design of the info window for error messages was revised and given a meaningful icon, so that stack traces are hidden in the future.
- Admins can now regenerate CSV export files of payroll statements that have already been created in the Payroll area,
- In the area of daily deductions in travel expense reports, it is now possible to specify whether paid meals of a category (= breakfast, lunch, dinner) are to be taken into account in general or not. This allows faster entry of longer business trips.
- In the overview list of persons (po_showPersons.act) and that of groups (po_showGroups.act), the "Client" column was removed to make the list view more compact.
- The download of the journal (ta_getJournal.act) as a PDF and via an external PDF reader (not in the browser!) was improved, so that the download page closes immediately once the download is complete.
- Improvement of the filter for the person view (po_showPersons.act) and the group view (po_showGroups.act), so that contradictory filter settings are avoided and, when switching clients, the previously selected organizational structure is reset.
