Update 2025-07-25 (4.60.16)

Updated to version 4.60.16[1].

Restricted Visibility for HR-Expert Users Without Client Permissions

A new configuration option has been introduced for HR-Expert: On request, it can be set so that HR-Expert users who do not have permission for the entire client no longer have access to the dashboard or to reports. Instead, these users see only person-specific or group-specific data, without analysis functions.
This setting can be enabled by our support team on request and applies client-wide.

Automatic Selection of the Last Foreign Region on Multi-Day Trips

A new option is now available in the settlement definitions for travel expenses: For multi-day foreign trips, the most recently visited foreign region can now be used automatically for each travel day to calculate the per diem deductions. This simplifies the settlement and reduces manual effort.
Activation is available on request through support. Depending on the client configuration (standard vs. individual customization), the change may incur a fee or require a quote.

Additional bug fixes were also made.
