Recording, Booking, and Evaluation

The core functions of the **Project Time Management** module are the extensive options for recording and evaluating your project times.

The following options are available for recording project times:

- **Live booking of project time via the "stopwatch function"**
  [1]Booking project times as they actually occur: select the project and activity and record with the Start/ Stop button
- **Recording project times after the fact**
  [2]via the booking mask by selecting the date, start and end time, as well as project and activity

In addition, recorded project times can be **evaluated and displayed** in a tailored way via a separate, **configurable action**. There are numerous **filter and display options** for this.

- **Evaluating recorded project times**[3]
- **Configuring project time evaluations**[4]
