Jobs in Time & Attendance

Jobs serve as periodically running helper programs for the synchronization and processing of data. A basic introduction to job management can be found in the chapter Portal & Organization - System / Job Management[1].

They can be used in many ways and enable, for example, the creation of groups based on defined criteria and the sending of various system notifications in the event of special events in Time & Attendance. Furthermore, certain jobs can be used to filter defined irregularities in the Time & Attendance system, upon which certain requests are automatically generated and forwarded to employees for processing.

The following jobs are relevant for the Time & Attendance module:

- **Inform about Events**[2]
  This job sends information in the event of special events in Time & Attendance
- **Create Reallocations**[3]
  This job automatically creates requests for reallocations (e.g., overtime payout)
- **Process System Notifications**[4]
  This job creates various system notifications (workflow requests)
- **Build Custom Groups**[5]
  This is used to create groups based on defined values (attributes) from the time recording system
- **Get absence Text Modules**[6]
  This job creates text modules for all absence reasons in the Time & Attendance system (for all languages available in Webdesk; only the default language receives the text from the Time & Attendance system, the other languages receive the text prefixed with the language code)
- **Execute and Send Reports**[7]
  This job enables automated report generation and proactive notification of defined role holders.
- **SyncCalendarDates**[8]
  This job synchronizes absences from the IF6020 with the groupware system. This requires that the Groupware module is also licensed.
- **checkMaxWorkingTime**[9]
  This job continuously checks the current working time of employees and notifies them by email in good time before statutory maximum limits are reached.
- **ProcessTerminatedEmployees**[10]
  This job makes it possible to move certain persons into the termination group.

Other Jobs

- **Job migrateEmployeeId**[11]
  Transfers the personnel number and effectiveness marker to configured IF6020 info fields.
- **Job journalApprovalProcessReminder**[12]
  Reminds users to submit the journal for the previous month.
- **Job taIf2sqlSynchronizationJob**[13]
  Synchronizes the T&A data warehouse after the IF6020 accounting run.

Removed Jobs

- **Change Time Model and Fillup Booking**[14]
  This job for swapping daily programs was removed as of version 4.59. Existing jobs of this type are deleted automatically during the update.

Term Definitions

Job, trigger, email sending, etc. are described **here**[15].
