4.59.19

Release Notes - Webdesk - Version 4.59.19 - April 2, 2025

Bug Fixes

- [WD-18590[1]] - In the monthly journal configuration, 0 was incorrectly displayed everywhere in the summary. The display was corrected so that the actual values are visible again.
- [WD-18206[2]] - On mouseover, Saturday and Sunday were not distinguishable. This was adjusted.
- [WD-18501[3]] - Fixed an error, which improves the performance when opening the travel overview.

Improvements

- [WD-18327[4]] - The "Absent" option was disabled in the booking form, since clocking in with this reason makes no sense. This avoids unnecessary confusion.
- [WD-18593[5]] - The dashboard action in Webdesk (not in HR Expert) is now also available to customers with the license ta-if6020-info, even if no full booking license is present. It is deliberately accepted that functions may be visible that may not be usable.
