

# How can I restrict the use of the app function?

It is possible to exclude certain employees from mobile use of Personalwolke in the app.

Every employee of a company is automatically a member of the “ALL” authorization group from the time the person is created in the system. A **\$MobileApps-Users** role is attached to this group.

The screenshot shows the 'Group' configuration page. At the top, there are buttons for 'Save', 'Save & Close', 'Back', and 'Delete'. Below these are input fields for 'Client' (Sonne und Wind GmbH), 'Shortname' (SuW-ALLE), 'Name' (Alle Mitarbeiter), and 'Description'. A checkbox for 'Automatically add new persons to this group' is visible. Below the form are tabs for 'Roles', 'Persons', 'Action Permission', 'In competence of roleholders', and 'Settings'. The 'Roles' tab is active, showing a table with a role assignment for '\$MobileApps-Users' to the 'SuW-ALLE (Alle Mitarbeiter)' competence target. A blue arrow points from the 'Shortname' field to the '\$MobileApps-Users' role in the table.

Name	Competence target
\$MobileApps-Users	SuW-ALLE (Alle Mitarbeiter)

If an employee does not have this function, i.e. cannot use the app, please proceed as follows:

1. create a new permission group, e.g. ALL\_Mobile
2. assign the role \$MobileApps-Users to this group
3. now add all employees to this group who are to have access via the app in future
4. delete the role assignment to \$MobileApps-Users from the ALL group

It is not possible to delete the role exclusively for the employee, as it is an inherited role (=role that the person has through group membership).
