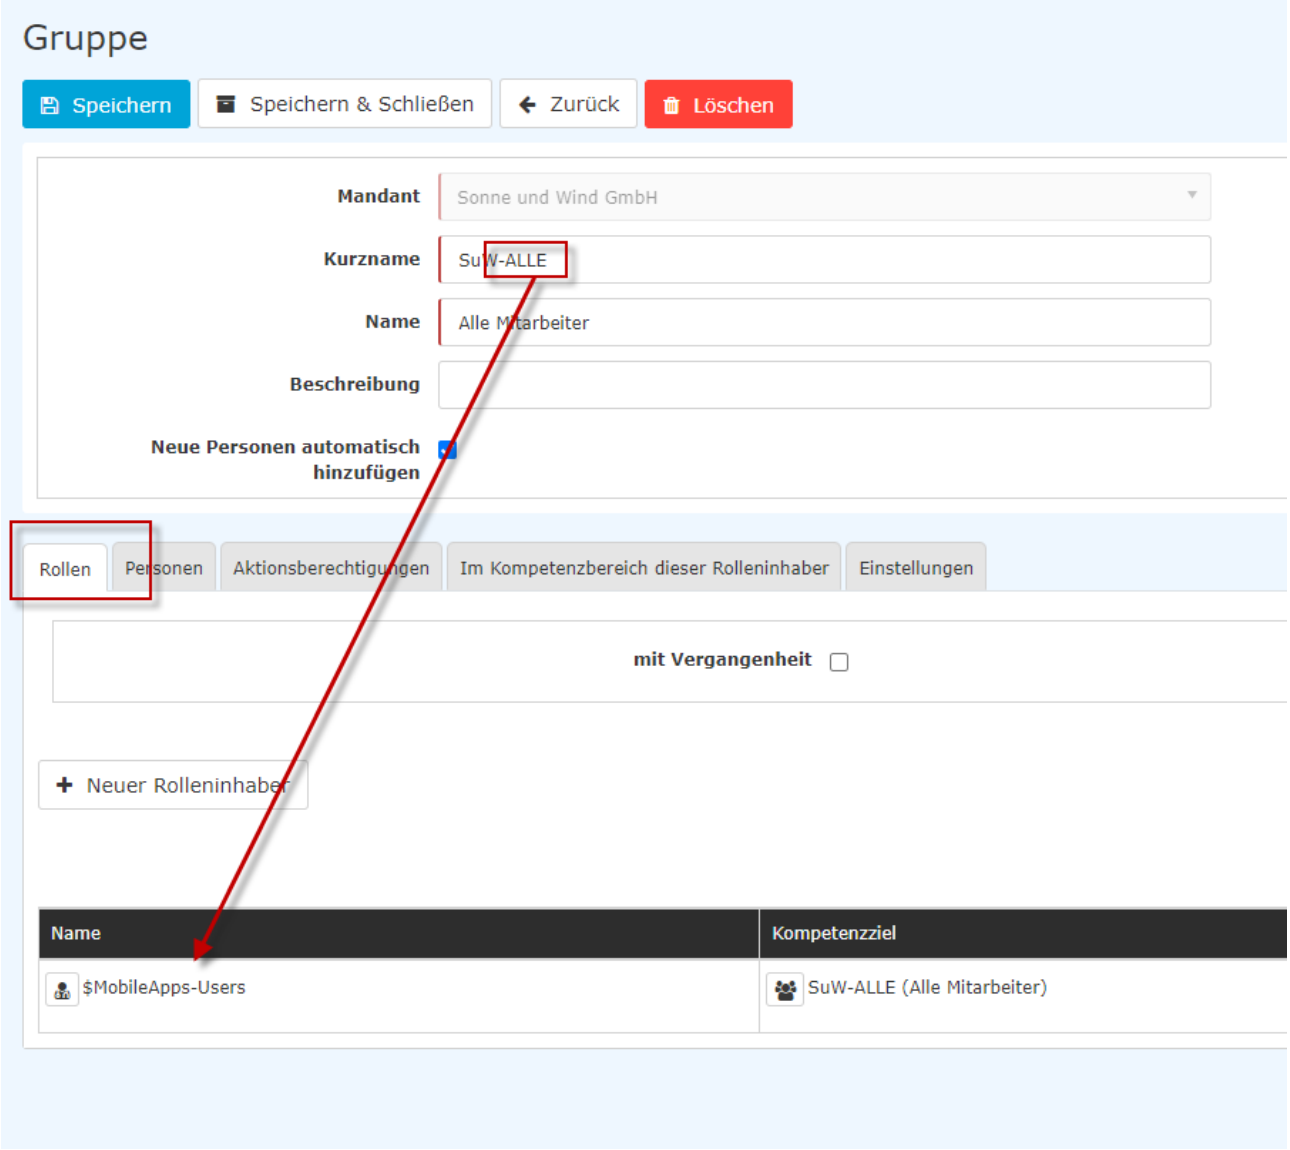
How can I restrict the use of the app function?

It is possible to exclude certain employees from mobile use of Personalwolke in the app.

Every employee of a company is automatically a member of the “ALL” authorization group from the time the person is created in the system. A **$MobileApps-Users** role is attached to this group.



If an employee does not have this function, i.e. cannot use the app, please **proceed as follows:**

1. Create a new permission group, e.g. ALL_Mobile

2. Assign the role **$MobileApps-Users** to this group.

3. Now add all employees to this group who are to have access via the app in future.

4. Delete the role assignment to **$MobileApps-Users** from the ALL group.

It is not possible to delete the role exclusively for the employee, as it is an inherited role (=role that the person has through group membership).

Please also do not delete the role $MobileApps-Users from the ALL group without replacing it!
