4.61.6

Release Notes - Webdesk - Version 4.61.6 - October 14, 2025

New Features

Extension of REST Endpoints

- [WD-19502[1]] - A new REST endpoint allows retrieving persons filtered specifically by client_uid.

Invoice Automation

- [WD-16924[2]] - A dialog for adjusting the prices of cloud licenses was introduced to easily implement index-based price increases (e.g. inflation). The adjustment takes effect from a defined date and for selected licenses. The previous assignments are historized.

Improvements

Optimization of Settings and User Interfaces

- [WD-19584[3]] - Public fields in the "Time and Attendance" settings can now be deleted by the customer.
- [WD-19588[4]] - Field groups in the settings can now be collapsed to improve clarity.
- [WD-19539[5]] - The fingerprint tab is now only displayed if fingerprint data actually exists.

Dashboard Improvements in the Calendar View

- [WD-19610[6]] - Absences created via bookings (e.g. home office) are now also displayed correctly in the dashboard calendar.

Improvements in System Integration

- [WD-19598[7]] - The Microsoft Graph API used was updated to a newer version.
- [WD-19625[8]] - Webdesk now supports embedding in iframes of a different origin, through adjustments to the Content Security Policy, the framework conditions for SameSite cookies, and by avoiding direct references to window.parent.
- [WD-16461[9]] - The configuration of the 30-day trial form now automatically follows the selected region and loads the matching settings.

Bug Fixes

Corrections in Group and Person Management

- [WD-19558[10]] - The validity of groups is now more robust when adding persons with a retroactive validity date.
- [WD-19535[11]] - Creating new field definition groups no longer causes an error message ("id to load required").
- [WD-17943[12]] - The creation of test accounts for Germany now correctly takes the configured retroactive period into account (PoTrialClientOptions.monthsInPastForValidityStart).
- [WD-16925[13]] - Fixed person creation in the HRX module.

Stabilization of the Webdesk User Interface

- [WD-19550[14]] - Removing a dashlet in HRX caused an error message on the subsequent layout change; this behavior has been corrected.
- [WD-19573[15]] - In the menu tree search, entries found (e.g. daily/weekly programs) are visually highlighted again in V2024.
- [WD-19575[16]] - The automatic initialization of "Webdesk Preloading Kiosk Project permissions" at system startup can now be disabled; this prevents unnecessary system load (e.g. during updates in environments without kiosk usage).

Bug Fixes in Time and Absence Management

- [WD-19576[17]] - Inconsistent values occurred when running the job with the parameter "daysInPast"; the underlying issue has been fixed.
- [WD-17322[18]] - TA fields are again correctly filtered based on the person's employment contract and legislation.
