

Update 2025-06-04 (4.60.2, new features)

Updated to version [4.60.2](#)¹.

New Features

New Job for Importing Profile Pictures from Azure AD via GraphAPI

A new job has been introduced that allows photos to be imported from Azure AD (Entra ID) via the GraphAPI.

On request, the job can be configured for your system.

Improvements

Time Models

The weekly programs have been extended so that more cycles can now be entered for the time models. This makes it possible to create more complex and more detailed time models.

Time Corrections

For time corrections where automatic loading of bookings is enabled, it can now be configured that 0-minute bookings are deleted automatically as soon as the request is submitted.

The requester is informed about the erroneous 0-minute bookings by a validation message. These can be removed manually, or they can be left in place, in which case they are removed automatically from time tracking.

The requests can be switched over on request.

Performance Improvement and Consistency Assurance

In HR-Expert, the loading speed when opening persons has been improved.
