

Update 2025-10-14 (4.61.3)

Updated to version [4.61.3](#)¹.

Improvements

- In travel expense forms, only VAT rates with an actual value are now displayed. Values of 0 are hidden for a better overview.

Bug Fixes

- When saving a daily program, account entries were lost if certain rows were left empty. This affected both direct editing and use as a template.
- After a dashlet was removed from the dashboard, it could not be added again. The removed dashlets disappeared completely from the system, even after logging in again.
- When editing an existing travel expense form, the VAT rates for special cases were incorrectly displayed as 0.00, even though the correct values were present in read mode.
- With the "Show employees" option enabled, entering a search term in the organization chart caused no results to be displayed. The input form was grayed out and remained non-functional.
- An incorrect conversion of working time values resulted in an error message in the correction client for certain part-time configurations.
- When exporting standard project time reports to Excel, an empty file was generated even though data was displayed correctly in the system.
