Job kioskLogsCleanup

Purpose and status

The job cleans up the log files attached to all registered kiosks. It is configurable and active by default in the job descriptor.

Configuration

- **Number of days for which log files are kept** (daysInPast): Log files from before today's date minus this number of days are deleted.
- The i18n hint describes the setting as the number of days a log file is kept in the database.

Processing

The job loads all registered kiosks, checks their attached documents in the link logs and permanently deletes expired files. The total number of deleted files is output in the job log.
