4.64.47

Release Notes - Webdesk - Version 4.64.47 - October 6, 2026

Improvements

Travel Expense Tracking

- [WD-22760[1]] - The travel form now displays the itinerary as a visual timeline with icons for the modes of transport and a pinned summary of the trip data that remains visible while scrolling.

HR Expert

- [WD-22761[2]] - The employment table in HR Expert now displays a read-only column indicating whether an employment is linked to time tracking, including a tooltip with the associated ID.

Login / Logout

- [WD-21344[3]] - Fix for an issue where an invalid PIN during 2FA setup was treated as an internal server error instead of a user input error.

Other Improvements

- [WD-22765[4]] - Adjustment of the generic entity editor so that dynamic fields bound to specific clients can be selected and displayed correctly, without fields or values being mixed up between different clients.

Bug Fixes

Dashboard

- [WD-22649[5]] - Fix for an issue where using the dashboard on mobile devices could override the desktop layout and make scrolling difficult.

Login / Logout

- [WD-22764[6]] - Fix for an issue where the automatic sadmin login in development mode stopped working after the switch to SSO.

UI / UX

- [WD-22705[7]] - Fix for issues with the automatic switch between the desktop and mobile menu, so that the main menu is displayed correctly after resizing and menu items retain their labels.

Miscellaneous

- [WD-22320[8]] - The remaining JUnit 4 tests were migrated to JUnit Jupiter to ensure a uniform test environment.
- [WD-22687[9]] - A pilot project is testing the caching of Maven build results in order to reduce build times and verify the correctness of invalidation.
- [WD-22712[10]] - An automatic syntax check ensures that new or modified JavaScript files in the browser client are compatible with the ES2018 standard before they are committed.
