4.52.13

Release Notes - Webdesk - Version 4.52.13 - July 21, 2023

Bug Fixes

- [WD-15128[1]] - Fixing an issue improved the speed when creating persons in systems with many users.
- [WD-15849[2]] - Fixed an issue when changing role assignments in HRX
  - The "Valid until" date can no longer be set to a date in the past (previously, a past date could be entered, but it was automatically changed to 01/01/3000. Entering a past date for the end of validity is now no longer possible.)
  - The current date can now be used again as the "Valid until" date (Use of the current date could previously not be processed sufficiently.)
- [WD-15903[3]] - Fixed an issue with the person list (po_showPersons). This issue caused an empty list to be generated if action permissions were managed via loose groups. (Regression since 4.52.11)
- [WD-15907[4]] - Fixed an issue that caused email sending with SSL not to work correctly (Regression since 4.52.11)

Improvements

- [WD-15870[5]] - Improvement in the HRX-TA synchronization: it is now possible to select when the automatic synchronization of the **currently valid employment status** is run. This affects the synchronization of changes to the current employment status made directly in HRX.
  - Never: Only future statuses are synchronized
  - Always: Changes to the current employment status are immediately synchronized to the time tracking system. Furthermore, all fields in time tracking that are affected by this synchronization are read-only
  - On time tracking activation: The values of the current employment status are only synchronized to time tracking while it is being activated.
