# 4.62.3

Release Notes - Webdesk - Version 4.62.3 - December 22, 2025

## Bug Fixes

### Travel Expense Tracking

- [WD-19926[1]] - Fix for an error in travel processing where starting the process failed and triggered an error message.
- [WD-19922[2]] - Bug fix for the synchronization of trip segments with legs and mileage reports, so that automatic adoption works again.

### Project Time Tracking

- [WD-19909[3]] - Fix for an error in the project selection that impaired the search function and the displayed results.

### Interfaces

- [WD-19894[4]] - Improvement of the calendar synchronization: check whether mailboxes exist in O365 before appointments are synchronized, to avoid unnecessary error messages.

### Mobile App

- [WD-19874[5]] - Fix for an error in the Personalwolke app where uploading multiple receipts was not possible.
- [WD-19781[6]] - Bug fix in the iPhone date picker of the Personalwolke app, which caused an endless loop when changing the date.

### Kiosk

- [WD-19925[7]] - Fix for an error that prevented the kiosk module from starting during deployment due to faulty dependency injection.

### Other Bug Fixes

- [WD-19921[8]] - Fix for a startup error caused by a faulty module assignment in certain licenses.
