# 4.61.10

Release Notes - Webdesk - Version 4.61.10 - November 10, 2025

## Improvements

- [WD-19631[1]] - Added the ability to log in from a kiosk using a short-lived login token. This allows logged-in users to be securely authenticated within an iframe.

## Bug Fixes

- [WD-19712[2]] - Fixed an error when editing events that could cause an error message when removing a resource usage.
- [WD-19167[3]] - In PDF and Excel exports of Journal V2, the display of the absence reason ID was corrected. The ID is now only output if this is explicitly enabled in the configuration.
- [WD-15280[4]] - Fixed a display issue in time tracking where bookings ending at 24:00 were incorrectly displayed as 23:59. The display now corresponds to the expected behavior again (20:00-00:00).
