4.61.11

Release Notes - Webdesk - Version 4.61.11 - November 19, 2025

Improvements

- [WD-19646[1]] - The backend was adjusted to support weekly summaries in Journal V2. The summaries can optionally be enabled and also take data from the previous month into account if the week starts there.

Bug Fixes

- [WD-19528[2]] - Correction of time tracking for on-call duty: The daily period is now correctly handled up to 24:00, which eliminates the previous loss of minutes and display issues when correcting times.
- [WD-19744[3]] - Fix for an issue when retrieving free/busy data for more than 20 participants. The retrieval no longer fails due to an invalid time zone value.
- [WD-19737[4]] - Fixed an error in the execution of the WfCheckDeadlines job, which stopped after some time due to faulty cache data. The stability of the job run has been improved.
