4.61.12

Release Notes - Webdesk - Version 4.61.12 - November 26, 2025

Improvements

- [WD-19725[1]] - The weekly overview in Journal V2 has been extended: The configuration from the backend is now taken into account in the frontend, so that weekly total rows are displayed correctly.
- [WD-19007[2]] - The most recently selected page size in the group calendar is now permanently saved and is retained even after reopening the view.

Bug Fixes

- [WD-19740[3]] - Downloading journals via the URL parameter "format=pdf" works as expected again.
- [WD-19742[4]] - Fixed an error when saving time zones that caused certain time zones to not be saved despite being selected correctly.
- [WD-19774[5]] - When editing time expenditures, an error message occurred due to a missing configuration; this behavior has been corrected and the stability of the integration has been improved.
- [WD-19807[6]] - Added missing translations in the "LegalPermitExpiring" dashlet.
- [WD-19818[7]] - In case of faulty access to certain internal mount paths (/dm, /wf, /rp), no sensitive information is disclosed anymore; instead, a 404 page is now correctly displayed.
- [WD-19326[8]] - In the menu, light-colored fonts on a white background were adjusted to improve contrast and readability in dark mode.
