4.60.1

Release Notes - Webdesk - Version 4.60.1 - May 12, 2025

Improvements

Navigation in the Person Editor

- [WD-17318[1]] - The navigation in the person settings was revised. Instead of a dropdown menu, a table is now used, so that all options are visible at a glance and operation is simplified.

Bug Fixes

Corrections in the Correction Client

- [WD-18675[2]] - The display of half-day absences in the correction client was corrected. They were lost on reload although they had been saved correctly.
- [WD-18746[3]] - Fixed an error when changing the date without existing time recording data. Instead of an error message, understandable feedback is now displayed.

Improved Stability of Jobs

- [WD-18719[4]] - Several jobs were adjusted to allow parallel executions without side effects.
- [WD-18751[5]] - Fixed a problem with placeholders in job notifications.
- [WD-18715[6]] - Eliminated an error during startup.

Print Error in Group View

- [WD-18707[7]] - An error message occurred when trying to print groups. The error was fixed, and printing is possible again.

Bug Fixes in HR Expert

- [WD-18412[8]] - In some cases, the recalculate dialog in the "Time and Attendance" tab did not respond. The error handling was revised, and problems during calculation are now displayed in an understandable way.

Error in REST Endpoint

- [WD-18742[9]] - The journal endpoint no longer returned future absence bookings, even though comments were present. The behavior was adjusted so that this information is delivered correctly again.

Faulty Display on iPhones with a Notch

- [WD-18424[10]] - In the mobile app, the header was partially displayed incorrectly on devices with a notch. The rendering was corrected accordingly.
