4.60.11

Release Notes - Webdesk - Version 4.60.11 - July 2, 2025

Improvements

- [WD-18687[1]] - The details of open tasks for acknowledgeable messages now additionally display the title of the message.

Bug Fixes

- [WD-19043[2]] - Various lists in "HRX" (e.g. "Contingencies" and "Evaluations") ignored the client selection and displayed all data system-wide.
- [WD-19057[3]] - Certificate expiration dates were not displayed in HRX reports.
- [WD-19105[4]] - In the administration interface, the configuration option for time corrections was missing for travel types.
- [WD-19090[5]] - In the travel evaluations, export checkboxes were not displayed when grouping by cost centers was enabled.
- [WD-18976[6]] - Restoring the time bookings for rejected inverse time corrections failed if the original bookings (before the correction) contained open or 0-minute intervals.
- [WD-18819[7]] - After changes to editable columns in the correction client, calculations and screen updates were not executed reliably. This affected the mode in which only the daily working time is entered and the correction client automatically enters and accounts for an absence reason.
- [WD-18966[8]] - On mobile devices, action buttons in project time tracking were not aligned correctly.
- [WD-19085[9]] - In the mobile dashboard view, the house icon used for home office/telework was missing.
- [WD-19005[10]] - The configuration option "Enable Groupware" (enabling the functions for synchronization with external calendar systems) in the group calendar was no longer visible.
- [WD-19042[11]] - System messages valid only for the current day were not displayed.
- [WD-19018[12]] - Changes to calendar configurations were not saved.
- [WD-19063[13]] - During the automatic shift change, an error message occurred on customer systems despite correct configuration.
- [WD-18631[14]] - In Personalwolke, an error occurred due to overfull queues.
