4.60.18

Release Notes - Webdesk - Version 4.60.18 - August 1, 2025

New Features

- [WD-19205[1]] - The "System Maintenance" menu item in the HR Expert module is now only visible to users with cross-area client access. This improves clarity for standard users.

Improvements

- [WD-19216[2]] - Pagination and a search function were added to the "Active Jobs" page to make managing large amounts of data easier.

Bug Fixes

- [WD-19107[3]] - Fixed a problem that caused no actions to be usable in version 4.60.17
- [WD-19194[4]] - A misleading error message was displayed when creating new groups if invalid special characters or umlauts were used in the "Short name" field. The validation was adjusted to give understandable and correct feedback.
- [WD-19236[5]] - A JavaScript error when loading the dashboard led to rejection by Apple. The error in the global script checkWebdeskPackage was fixed so that the app now works as expected again.
