4.59.17

Release Notes - Webdesk - Version 4.59.17 - March 28, 2025

Bug Fixes

- [WD-18556[1]] - Incorrect display of working times: When displaying time values in the user profile, faulty conversions between dot and colon notation occurred. As a result, times were displayed incorrectly in the time tracking settings in certain cases. The values are now stored and displayed consistently.
- [WD-18563[2]] - Kiosks did not work with version 4.59.x: After the journal was migrated, problems occurred in the kiosks because they still expected the old data model. The missing information is now added specifically for kiosk requests, so that the "My Info" view works correctly again.
- [WD-18356[3]] - Faulty date entry when changing categories: When changing the category in the time tracking settings (po_editPerson.act), date fields became unusable. This error was fixed.
