Absences

The **absence component** is used to record **full-day** or **half-day absences** (start and end of the absence, absence reason, half-day, comment) in an annual view.

For this purpose, a configuration is derived from the action "**ta_absenceClient**" (Absence client).

Configuration

- **Time and attendance system**
  Interflex IF6020, Interflex IF6040, or Webdesk time evaluation.
- **Absence reasons**
  Selection of the absence reasons that can be used in the absence client (Available / Usable).

For which employees absences can be recorded is defined via the view permissions of the action.
