4.59.34

Release Notes - Webdesk - Version 4.59.34 - September 30, 2025

Bug Fixes

Correction Client

- [WD-19382[1]] - Fixed an error where an error message was displayed when a date before the start of time recording was selected in the correction client.
- [WD-19406[2]] - Correction comments were no longer displayed when an account correction was made with the unit "h" (hours).

Calendar Display

- [WD-19332[3]] - The detail popup in the calendar now correctly respects the ExtendedAttribute CalendarDetailTemplate, which can display additional information about absences.
- [WD-19305[4]] - In Webdesk Administration, a display issue was fixed where the date picker (for selecting days) was cut off and not all days were displayed when the date field was near the bottom of the screen, because the date picker then extended beyond the screen.

Other Bug Fixes

- [WD-19308[5]] - The "Department Lists" report in HR Expert incorrectly displayed the "Export of Personal Data" report.
- [WD-19426[6]] - Re-entry of persons in HR Expert did not work if they had only an inactive or terminated employment status.
- [WD-19167[7]] - The Journal V2 exports (PDF/Excel) always contained the absence reason ID, even if it was not displayed in the web view. The export now follows a new configuration setting ("Show time reason IDs in exports" checkbox) with which the behavior can be controlled. By default, ID output is disabled.
- [WD-19285[8]] - Fixed an issue where forwarding rules were created multiple times when deletion in Outlook failed. The logic was adjusted so that in this case the rule is no longer deleted internally. Logging was also improved.
- [WD-19322[9]] - When creating a new "TmTravelConnector" configuration, the selection of the client was not taken into account correctly in the query. As a result, trips of all clients could be transferred. This behavior was corrected.
- [WD-19401[10]] - An error message occurred when adding a new custom action permission. The problem occurred in particular when multiple "special" permissions already existed.
