4.59.35

Release Notes - Webdesk - Version 4.59.35 - October 31, 2025

Important note: This release should not be used in production, as the "TaAggregateCalendarDates" job does not synchronize all entries correctly under certain conditions.

Improvements

- [WD-19599[1]] - The deletion logic for email forwarding rules was made more robust. After deletion, it is now checked whether the rule was actually removed in Microsoft 365. If not, it remains locally and deletion is retried on the next run.
- [WD-19598[2]] - Update of the Microsoft Graph API used to a newer version to ensure compatibility and stability.

Bug Fixes

- [WD-19628[3]] - In the mobile view, it was not possible to start a workflow request directly from a system notification. The dialog displayed incomplete texts and caused an error message when continuing. This behavior was corrected.
- [WD-19618[4]] - An error message occurred when updating a person with an empty but non-null taId. The process was adjusted so that empty identifiers are handled correctly.
- [WD-19532[5]] - When opening the day view, a faulty calculation of the target time (e.g. 3.6 hours instead of 3 hours 36 minutes) caused an error message. The calculation was corrected.
- [WD-19516[6]] - When displaying or saving daily programs, accounts from certain rows (e.g. rows 3–6) were not displayed or were deleted. The problem also occurs when used as a template and has been fixed.
- [WD-19513[7]] - An error message occurred when saving entities in the generic editor due to a duplicate key. The save process was corrected so that entries can be saved as expected again.
- [WD-19507[8]] - With the "Show employees" option enabled, a search in the org chart returned no results and blocked the input fields. The search now works correctly again and highlights matches as usual.
