Notes Connector

A Notes connector reads and writes Notes records from a Lotus Notes database.

Example of the configuration of a Notes connector

Database properties

- Server name
- User name
- Password
- Database
- Search string

Field values

The parameter defines whether the value of the Notes field is output according to the index or as a string separated by semicolons (if several entries exist). Possible selection:

- Value of the field according to index
- Value of the field as a string with semicolons
- **Index**
  If "Value of the field according to index" is specified as the type, the index must be specified
