Release Notes Webdesk EWP R3.2.2

General Information

As of version 3.2.2, the parameter "useRecordTransformerForOrgLists" should be set to "true", since this has a positive effect on the performance of all reports (Webdesk Administrator - System parameters).

Features

- After submitting a request via the context menu from the journal, you now return to the journal after the process starts.
- Business Trip module: alternative accounting for receipts added
- Business Trip module: the Vehicle column can now be hidden in the mileage allowance
- Performance improvements in transfer booking
- Workflow list: bulk processing of requests is now possible
- Performance of the DB connectors was improved
- Summarize connector: it is now possible to filter out rows with amounts of 0
- Travel request and travel expense report: attaching files is now possible

Bug Fixes

- Fixed the error in Booking / Time correction booking file (cost center - cost type)
- Master data/Accounts: Fixed the conversion error in the right column
- EditRole.js: when deleting a role competence assignment, the deputy was not taken into account
- Groupware module: synchronization no longer duplicates requests
- Calling a configurable action as firstAction is possible again
- Rescheduling module: Changes to reschedulings after saving are now taken into account correctly again for the entered period
- Business Trip module: Twelfths grid in the per diem calculation was corrected
- Business Trip module: Route details are no longer overwritten with default values when changed
- Permissions into the future are now handled correctly
- Fixed the i18n problem: text modules in the permission request are correct again
- Log mails for jobs are sent again
- Correction note for monthly approval was made easier to understand
- Users without an entry date appear in the monthly approval again
- Calculation of unscheduled/scheduled vacation in management lists was corrected
- Changes to saved time corrections are now applied (deleting rows)
- Job Swap daily programs now takes into account employees who joined during the query period
- Master data/Accounts: The heading of the left column is displayed again
- Anonymizing absence reasons is now also possible for absence reasons entered by the hour
