# 4.57.1

Release Notes - Webdesk - Version 4.57.1 - May 6, 2024

## Bug Fix

- [WD-16901][1] - Fix for an issue that prevented evaluating project times in report form for a group when a new member was added during the evaluation period of this group who was not yet present as an active user at the start of the evaluation period
- [WD-16976][2] - Fix for an issue in the mobile view of the Correction Client that prevented an entry from being saved correctly
- [WD-16769[3]] - Fix for an issue in the travel expense report area that caused attachments with € in the file name not to open in the view of open requests

## Improvements

- [WD-14496][4] - The design of the info window for error messages was revised and given a meaningful icon, so that stack traces are hidden in the future.
- [WD-16928][5] - From now on, admins can regenerate CSV export files of payroll statements that have already been created in the Payroll area,
- [WD-16986][6] - In the Daily Deductions area of the travel expense reports, it is now possible to specify whether paid meals of a category (= breakfast, lunch, dinner) are to be taken into account in general or not. This enables faster entry of longer business trips.
- [WD-16991][7] - The "Client" column was removed from the overview list of persons (po_showPersons.act) and that of groups (po_showGroups.act) to make the list view more compact.
- [WD-16464[8]] - The download of the journal (ta_getJournal.act) as a PDF and via an external PDF reader (not in the browser!) was improved so that the download page closes immediately after completion
- [WD-16990][9] - Improvement of the filter for the person view (po_showPersons.act) and the group view (po_showGroups.act), so that contradictory filter settings are avoided and the previously made selection of the organizational structure is reset when the client is changed.
