# 4.57.7

Release Notes - Webdesk - Version 4.57.7 - May 22, 2024

## Bug Fix

- [WD-17038[1]] - Fix for an issue in the area of travel expense reports/receipt types (action tm_editTravelType.act) that led to display errors in the input and function fields and to a missing option to select trip types
- [WD-17094[2]] - Fix for an issue that made it necessary to introduce a search function in the dropdown list of source connectors used in the configuration interface of the summary connector. This also applies to the field names in the repeater. In addition, the list of source connectors is now sorted alphabetically.
- [WD-17116[3]] - Fix for an issue in the time corrections area with the Autoload Booking feature that, in combination with certain daily programs, prevented entries from being captured correctly; for example, not all time data was saved in the correct form
- .[WD-16913[4]] - Fix for an issue that occurred in the time corrections area based on the Autoload Booking feature when using a daily program that was not valid for the time span 0:00 to 24:00, and that caused the data of the following day to be deleted as soon as a correction was entered.
- [WD-16775[5]] - Fix for an issue in the travel expense report area that caused unwarranted costs to be credited in the case of a one-day trip with a trip abroad lasting less than three hours

## Improvements

- [WD-17001[6]] - The layout of the view of a person's employments and employment statuses in HR Expert was improved, especially with regard to the display of numerous employment statuses
