TA Account Connector

With this connector, it is possible to export **daily account values** of the Time & Attendance system (Interflex IF6020) for a defined *selection of persons* and a *specific period*.

Configuring the Connector

- **Parent connector**
- **Name**
- **Data flow direction:**
  Data source
- **Description**
- **Do not export 0.0 values:**
  Only persons and days where at least one account has a value other than 0.0 are exported.
- **One account value per page:**
  If multiple accounts are defined, only one account value is shown per person and date in the result. If, for example, 4 accounts are defined, there are 4 pages per person and date in the result!
- **TA accounts**
  - TA account
  - Column name
  - Up and down arrow
  - Delete
- **Persons**
- **Groups**
- **Clients**

Period

The period is specified via the restriction (constraint) of the connector query with the variable **referenceDate** and date values in the format yyyyMMdd, e.g., *referenceDate = '20160119'*, *referenceDate >= '20160101' and referenceDate <= '20160119'* or *referenceDate between '20160101' and '20160119'*. Without a restriction, the values of the previous day are exported. Only days before the current day and within the person's time recording period are exported; persons without a taId are ignored.

Fields Provided

- date, firstName, lastName, taId, employeeId, person, orgUnit
- for each configured TA account, a field with the specified column name, or, with **One account value per page**, the fields accountName (TA account) and accountValue (account value)
