Scheduling Structures

In the Scheduling Structures menu item, **rescheduling structures** are **created** and **managed**, as is the assignment of rescheduling categories to the rescheduling structures created.

Examples of possible scheduling structures:

- Organizational units
- Daily schedules
- **Service name**
  Possible choices:
  - **Rs Ta Broker**
  - **Rs Wf Broker**
- Group assignment
- **Whole days only**
  If this parameter is checked, only whole days can be scheduled. If it is not checked, the time interval can be entered freely.
- **Overlapping**
  If this parameter is checked, schedules can be requested and entered with overlaps.
- **Are intraday schedules across midnight permitted?**
  If this option is enabled, an intraday schedule across midnight can be entered. This means that an end time that is earlier than the start time is automatically interpreted as a time after midnight (i.e. the next day)!
- **Are schedule repetitions on weekends permitted?**
  This parameter allows schedule repetitions on weekends as well.
