Connectors in Project Time Tracking

Connectors serve as a **connection of the system** to the outside and can considerably simplify working with large amounts of data, especially during configuration. For example, connectors can be used to **import** various data records such as persons, groups, or projects into the system or to **export** them to various formats.

The **"Project Time"** module offers the following connectors, which can be used:

- **Ptm Cost Object Connector**
  [1] This connector makes it possible to export cost objects to a file or import them from a file.
- **Ptm Cost Object Effort Connector**
  [2] With this connector, services already performed on cost objects can be imported into the system or exported to a file.
- **Ptm Effort Connector**
  [3] This connector makes it possible to export project times to a file or import them from a file.
- **Ptm Project Connector**
  [4] This connector makes it possible to export projects to a file or import them from a file.
- **Ptm Customer Connector**
  [5] This connector, as a linked connector, makes it possible to export the customers assignable to a project to a file or import them from a file.
