Jobs Portal & Organization

Jobs relevant to the **Portal & Organization module**:

- **Import OrgData**
  [1]This configurable job imports organizational data (e.g. hierarchy and superiors), for example from other systems.
- **Start Connector Link Sync**
  [2]This configurable job can be used to start one or more connector synchronizations.
- **Job Execute and send Reports**
  [3]This job enables **automated report generation** and **proactive information** to defined role holders.
- **Job Execute and Store Reports**
  [4]This job generates reports and stores them in a previously configured folder, so that various employee statistics can be archived.
- **Job Delete Log Data**
  [5]This job cleans up the log entries, making monitoring easier for the administrator and avoiding unnecessary load on the database.
- **Job Build Groups and Assign Persons**
  [6]This job allows persons to be imported from an external database while simultaneously adding them to predefined groups within the organizational units.
- **Job Custom Java Script**
  [7]This job allows your own Java scripts to be written and executed.
- **Job Java**
  [8]This job allows complex Java programming to be carried out in Webdesk.
- **Job DeletePersonsInTrashBin**[9]
  This job permanently removes the data of already deleted or departed persons from the database and connected systems, in a GDPR-compliant way and with a complete deletion log.
- **Job Execute Batch Jobs**[10]
  The executeBatchJobs job runs several background processes one after another. This allows dependent tasks to be bundled in a defined order, without having to start each one individually via the scheduler.
- **Job importEmployeePhotos**[11]
  This job enables the regular import of person photos from a file directory.
- **Job Record system eventualities**[12]
  This job collects all currently detected eventualities every day (e.g. conflicts or consistency violations in HR data) and keeps them up to date in the database.
