

Connectors in Project Time Acquisition

Connectors serve to **connect the system to external environments** and can greatly simplify work with large amounts of data, especially during configuration. For example, connectors can be used to **import** different data sets such as persons, groups or projects into the system or to **export** them in different formats such as CSV files.

In the module "**Project Time**", there are the following connectors at your disposal:

- **Ptm Cost Object Connector**

¹This connector serves to import cost objects into the system or to export them to a file.

- **Ptm Cost Object Effort Connector**

²With this connector, you can import and export efforts that are booked on cost objects.

- **Ptm Effort Connector**

³This connectors enables you to import project efforts into the system or to export them.

- **Ptm Project Connector**

⁴This connectors imports bookable projects into the system or exports them.

- **Ptm Customer Connector**

⁵This connector acts as a linked connector and makes it possible to import or export the customers that can be assigned to project efforts.
