Ptm Customer Connector

This connector makes it possible to import or to export **customers** in the context of project time recording. These customers can be **imported** from a file to the system or **exported** into a file and can be connected with project efforts.

The fields to be linked refer to the common customer data which must also be entered when creating a new customer directly in the system - when exporting, e.g. to a CSV file, these are the terms in the top line:

$client	client in system to which the customer belongs
$this	This field is developer-specific and can currently not be used by the standard user/administrator.
city	city/village of customer's address
contactPerson	Contact person at the customer's
country	Country of customer's address
description	closer description/notes about customer
mail	email address of customer
name	Name or company name of the customer
phone	telephone number of customer
shortName	(internal) short name for customer
streetAddress	Street name of customer's address
type	*internal* or *external* customer
website	Website of customer
zip	Zip code of customer's address
