# Webdesk 4

## General

This article describes the steps required to install a **Webdesk 4.x**.

## Steps in Detail

**File used for the installation:** setup-webdesk-xxxx-xx-bit.exe

Double-click to start the installation.

- Select language: German or English
- The welcome screen appears --> Next

- Select installation variant:
    - Standalone installation
      with application context path: webdesk
      Standalone is selected if no other web server is to run on this device
    - Installation in an existing web server
      This installation is selected if a server with a Tomcat already exists
  - Select Standalone, then continue

- Select target directory - C:\WebdeskEWP - install

- Webdesk is installed

- Select license
    - License file (text field with chooser)
      The license must be requested from Workflow
    - Demo license
  - Select the license, then Next

- Select Webdesk database type
    - Database server
      Select this option if permanent operation is desired (separate SQL Server, etc.)
    - Temporary database
      These are included in the Webdesk setup, but lose their entries as soon as Webdesk is shut down
  - Select Database server, then Next

- Important information about the databases appears --> Next

- Webdesk database connection

    - User: wdadm
    - Password: wdadm
    - Hostname: localhost
    - Database: SQL Server
    - Schema: webdesk

    - Port: 1433
    - JDBC URL: jdbc:sqlserver://localhost:1433;databaseName=webdesk
    - Next
- The connection was successful! --> Next

- Shark database connection

    - User: wdadm
    - Password: wdadm
    - Hostname: localhost
    - Database: SQL Server
    - Schema: webdesk
    - Port: 1433
    - JDBC URL: jdbc:sqlserver://localhost:1433;databaseName=shark
    - Next
- Installation completed successfully!

    - "Start Webdesk Server" is checked
    - "Start web browser for Webdesk" is checked
    - Finish
- A window with Webdesk opens in the web browser
- In the services, check whether the Webdesk server is running
- Open the properties of the Webdesk server and change the startup type to Automatic - Apply - OK
- Log in as administrator in the browser window
