Webdesk TA Connector

General

This article describes the steps required to install a **Webdesk TA Connector**, which provides the connection between **Webdesk** and the **Interflex 6020** system.

Steps in Detail

File used for the installation: setup-tacon-xxxx-xxbit.exe

- Double-click to start the installation
- Select language, then click "OK"
- Welcome to the wizard --> Next

- How many RMI servers should run concurrently: "7" is preset (the higher the value, the more simultaneous requests can be processed), then Next

- Interflex TA Connector is installed

- Installation finished --> Next

- Interflex server location:
  Where is the Interflex server located? Enter the path here using the chooser or by direct input

- Finish - leave the checkbox "Start TA Connector" checked - Finish

- In the Windows services, check whether Webdesk TA-Connector for IF6020 has started automatically; if not, change it
