

Update 2021-08-02

Upgraded to version 4.30.4.

This resolved the tickets of the following versions:

- [4.30.0](#)¹
- [4.30.3](#)²

Customizing Options

#1 Adjusting Project Time for Break Deduction

In general, all employees should take a 30-minute break every day. If no such booking is made, an automatic break deduction can be configured. When using the Personalwolke "Project-Time" module, this break deduction is now also taken into account in the recorded project time. Since there are several variants of how Personalwolke should behave in such a case, this is a customizing option.

#2 Transferring the Employment Status to Time Tracking

When the Time and HR-Expert modules are used in combination, it was previously necessary to first set, for example, the employment status "Parental leave" in HR-Expert and then apply this change manually a second time in time tracking. To make your work more efficient and less error-prone, it is now possible to activate a synchronization of employment statuses to time tracking. This automatically sets the matching absence interval in time tracking for certain employment statuses. (Prerequisite: You use the Time & HR-Expert modules).

#3 Deleting Project Times

Within the workflow approval process, all project times for a day can now be deleted with a single click. A notification about the deletion is sent automatically to the user.
