

Use of the filter

This document demonstrates the **operation of the filter function** using the example of "[Uncompleted requests](#)". However, the same options are also available for "Open ToDos"

The **filter function** (Show Filter) allows you to search for specific requests in the workflow lists.

This function is available for

- every staff member for their own requests and processes
- owner of the role "Personal" for all employees within their area of competence
- owner of the role "Manager" for all employees within their area of competence
- local administrators for all employees of the organization

The screenshot shows the 'Open ToDos' header with a toolbar containing 'Perform marked actions', 'Refresh', 'Selection', 'Show Filter' (highlighted with a red box), and 'Hide Progress'. Below the toolbar is a table with columns: 'ToDo assigned', 'Author of Process', 'Activity', 'Details', 'Progress', and 'Action(s)'.

Now click on the button to open the input screen.

The screenshot shows the 'Open ToDos' header with the same toolbar. Below the toolbar is a filter input form with the following fields: 'Author of Process' (dropdown), 'Group' (dropdown), 'Process' (dropdown), 'Creation date from' (date picker), 'to' (date picker), 'Effect date from' (date picker), 'to' (date picker), and 'Available Action' (dropdown). An 'Apply Filter' button is located to the right of the date pickers. Below the form is the same table as in the previous screenshot.

Using the following parameters (search criteria) you can then search for the relevant request:

- **Author of Process**
Here you can search for a specific applicant > selection of the desired person (process author) from the list of names.
- **Group**
With this parameter, you can select a specific group (e.g. management or marketing), or search in all groups.
- **Process**
Search for a specific process (for example, all vacation requests of a desired person > Process vacation). If you want to see all requests, select "All processes" as parameter
- **Creation date from / to**
Search for requests with a specific creation date (it is possible to enter either from - to date, or for example only to date to see all requests submitted up to a specific date)
- **Effect date from / to**
All applications whose validity period is valid from the from date are displayed. In addition, you can limit the effective date with the to-date parameter.

The "Open ToDos" area contains an additional filter function: the status of the task can be selected under "Selection".
