4.55.3

Release Notes - Webdesk - Version 4.55.3 - December 7, 2023

Bug Fix

- [WD-16431[1]] - Fix for a regression from 4.54. This issue caused the ZEF master record number lock, which protects against two Webdesk TaCon processes editing an employee's time data at the same time, to be lifted. This led to inconsistent data in the payroll calculation for this employee (duplicate surcharges)
- [WD-16045[2]] - Fix for an issue that delivered incorrect vacation plan data in the vacation request when a vacation day was entered for an employee on the first day of the next vacation year. .
