4.55.5

Release Notes - Webdesk - Version 4.55.5 - December 21, 2023

Bug Fixes

- [WD-16423[1]] - Fix for a display issue in the HR Expert area in the Time Tracking tab when time tracking was activated for a newly created person with a date in the future. In this case, the time and attendance master record was created correctly, but in HR Expert it looked as if it had not worked.
- [WD-16158[2]] - Fix for a network error in the query with the action **ta_getOrgJournal.act** when the *client-side rendering* option was activated in the configuration. The error occurred only with grouping enabled and with selected groups whose short name contained an underscore (_) and was longer than 20 characters.
- [WD-16420[3]] - Fix for an issue in HR Expert that led to an incorrect display of icons in the Person/ Organization/Group tab
- [WD-16465[4]] - Fix for a performance problem related to opening a person from the person list in HR Expert. Opening a person with HR Expert should now take less than 2 seconds from the second time onward.
- [WD-16468[5]] - Fix for an issue in the TaJournalConnector that did not take the employment status into account in the query result for a specific period and also displayed employees who had already been terminated
