# Daily Maximum Working Time Filter

## General

The daily maximum working time filter makes it possible to evaluate working time exceedances and shortfalls, including the absence reasons for them, over a specific period.

You can find a description of the search form and of features such as filtering and hiding HERE[1].

The extended use of filters is described under "Using Filters in Report Search Forms[2]".

## Accounts shown

This filter does not show accounts in the strict sense, but lists attendance or absence times in the corresponding period.

The following data, in addition to the personnel data, is used for this.

- **FB**: Booking indicator that shows any booking outside the time frame
- **Booking**: Time booking on this date
- **FE**: Error indicator[3]
- **Absence reason**: Reason for the absence
- **Daily working time**: working time on this day resulting from the bookings
