4.55.15

Release Notes - Webdesk - Version 4.55.15 - February 7, 2024

Bug Fixes

- [WD-16650[1]] - Fix for a regression from 4.54. This bug caused the ZEF master record number lock, which prevents two Webdesk Tacon processes from simultaneously processing an employee's time data, to be lifted. This led to inconsistent data in this employee's payroll processing (duplicate surcharges)
