4.59.6

Release Notes - Webdesk - Version 4.59.6 - March 5, 2025

Bug Fixes

- [WD-18434[1]] - The seperatorFileConnector now correctly reads data from CSV files on the local disk again. The problem occurred after updating to version 4.59.
- [WD-18383[2]] - String parameters in report definitions are no longer incorrectly set as optional parameters of type PoLaborContract.
- [WD-18398[3]] - Missing booking times in the Excel export of the booking list (ta_getOrgJournal.cact) are now exported correctly.
- [WD-18400[4]] - Unclear values in the "Booking Durations" column in the journal are now displayed correctly.
- [WD-18439[5]] - Fixed SQL errors that prevented absence requests from being started.
- [WD-18287[6]] - The colors for weekends and holidays in the PDF and print export of Journal V2 are now displayed correctly.
- [WD-18411[7]] - Negative balances in the ListDetailTemplate of the JournalApproval system process are now displayed correctly.
- [WD-18419[8]] - The approver information in the journal approval process now correctly shows the actual approver and no longer incorrectly shows the employee themselves.
