4.59.11

Release Notes - Webdesk - Version 4.59.11 - March 13, 2025

Bug Fixes

- [WD-18499[1]] - Fixed an error where the correction client displayed incorrect daily working times and target times.
- [WD-18511[2]] - Fixed an issue where text module names were displayed instead of the translated absence reasons. The correct translations are now used.
- [WD-18420[3]] - Days on which there are only bookings with a total duration of 0 hours can no longer be submitted in the monthly journal. Users now receive a notice that a time correction is required.
- [WD-18501[4]] - Fixed an error that caused calls to the travel overview to generate high server load.
