4.58.36

Release Notes - Webdesk - Version 4.58.36 - March 17, 2025

New Features

System Parameters

- [WD-18494[1]] - Introduced a new system parameter that can be used to disable PostLoginHandlers for potential performance improvements during login.

Bug Fixes

Issues with Reports and Exports

- [WD-18016[2]] - When exporting travel lists (My Trips, My Employees' Trips, ...) to Excel, columns containing only numeric values were truncated. This issue has been fixed, so the values are now transferred correctly.
- [WD-18383[3]] - When editing report definitions, certain input fields were automatically filled with incorrect values

Correction Client

- [WD-18082[4]] - Manually added comments in the Correction Client were not counted in the total number of comments. The display was corrected so that all comments are now taken into account.
- [WD-18389[5]] - In the day view of the Correction Client, comments were not displayed or were displayed incorrectly. This issue has been fixed, so the correct comments are now loaded.

UI Errors in Journal and Report Views

- [WD-18407[6]] - In certain cases, the fixed header row of Journal V2 was overlapped by the data rows beneath it. This display issue has been fixed.
- [WD-18406[7]] - The label of the "Cancel" button was very hard to read in the loading indicator for client-side account and booking lists. The color scheme was adjusted so that the text is now clearly legible.
