4.59.18

Release Notes - Webdesk - Version 4.59.18 - April 1, 2025

Bug Fixes

Correction Client

- [WD-18577[1]] - Error when opening the correction client with the monthly approval workflow enabled: When starting the correction client, an error message occurred in certain months due to an invalid date (e.g. "April 31"). The error was fixed.
- [WD-18581[2]] - Monthly approval not possible: A faulty system message prevented the monthly approval from starting. This was corrected.
- [WD-18422[3]] - Time fields incorrectly editable for vacation: After changes to absences in the correction client, time fields for vacation days became incorrectly editable. This behavior was corrected.
- [WD-18573[4]] - Error when deleting open booking intervals: When trying to delete an open booking interval from the past, an error message occurred. The operation now works as expected.
- [WD-18574[5]] - Refresh of the day view does not work reliably: Bookings made directly in the system were not displayed correctly in the day view of the correction client despite a manual refresh. The refresh of the view was corrected and now reliably shows same-day changes as well.
