4.59.23

Release Notes - Webdesk - Version 4.59.23 - April 24, 2025

Bug Fixes

- [WD-18579[1]], [WD-18595[2]] - The following issues were fixed for the multiple selection of VAT rates in entertainment receipts:
  - The 0% tax rate was not displayed even though it was configured in the settings.
  - Decimal numbers with a comma were interpreted incorrectly when entering the tax rate and led to an incorrect calculation of the amounts.
- [WD-18589[3]] - The display of vacation usage in the vacation request was sped up considerably. Previously, loading could take up to a minute, especially when changing the date range.
- [WD-18676[4]] - In the editing views for travel types and record types, an empty value could no longer be selected. This problem was fixed so that "No selection" is possible again where intended.
