4.59.25

Release Notes - Webdesk - Version 4.59.25 - May 8, 2025

Bug Fixes

- [WD-18742[1]] - Fixed an issue in the journal endpoint where future absences were present as comments but were not displayed in the bookings. This meant that bookings, e.g. for vacation days in the future, were missing from the result.
- [WD-18751[2]] - After a version update, placeholders in automatically sent emails of the job *TaCheckMaxWorkingTime* were no longer replaced with values. The problem was fixed so that the notifications contain the expected content again.
