4.60.8

Release Notes - Webdesk - Version 4.60.8 - June 18, 2025

Bug Fixes

- [WD-19027[1]], [WD-19030[2]] - Two issues related to workflow attachments were fixed: First, when retrieving attachments, an error message was returned in certain cases instead of a list. Second, in large systems the indication of existing attachments occasionally was missing in the workflow list, due to a load time limit that was too short, which has now been extended.
- [WD-19021[3]] - An error message occurred when saving new acknowledgeable messages, because the fields for valid-from and valid-to were not marked as optional in the database. This has now been corrected.
