4.60.15

Release Notes - Webdesk - Version 4.60.15 - July 18, 2025

Improvements

- [WD-18933[1]] - The performance of the kiosk app was optimized: Client-side caching of slowly loading endpoints (e.g. project tree, absence reasons)

Bug Fixes

- [WD-19126[2]] - Fix for a problem where the job processor no longer processed jobs. The cause was an overload from too many log messages, which blocked the system.
- [WD-18907[3]] - On iOS devices, the time and date pickers closed prematurely in certain cases without the user having pressed "Done".
- [WD-18939[4]] - The receipts view was faulty on mobile devices after selecting a receipt type and no longer showed labels.
- [WD-19183[5]] - In the attendance list, absences were incorrectly displayed as attendances.
- [WD-18872[6]] - Anonymized absence reasons were still displayed in the group calendar when clicking on the reason.
- [WD-18992[7]] - Changing the meeting date incorrectly caused the evaluation period of the Appraisal Interview to change.
- [WD-19175[8]] - In certain cases, the "Confirmation" tab in the Appraisal Interview was not populated correctly with data (e.g. after validation errors or tab switching).
- [WD-19114[9]] - The total in the account evaluations was displayed regardless of the configuration.
- [WD-19028[10]] - In the cost center selection window of the event assistant, incorrect content was displayed in several columns.
- [WD-19050[11]] - The shutdown process of the tacon RMI server showed unnecessary error messages in the logs even though the service was terminated correctly.
